

Design of LED optical lens and development of LED application products

The implementation of LED lighting within the illumination and sign advertising industries has become active in recent years, in response to environmental issues and the call for energy saving methods. In order to further enhance the quality of LED lighting, Effect Incorporated is developing products with unique optical designs. The company's specialty is in consistent design techniques required for the development of LED products including; heat dissipation design, optical design and electricity design, etc. Through such techniques, the company develops and markets optical lens and LED modules for the medical, domestic and industrial use.
