

NIKOUGIKEN Co., Ltd.

System Development for Monomer Casting Technology

Founded in 1984, our company—as a prototype manufacturer—has been persistently improving its technologies in order cope with drastic changes in society and to offer “*Monodukuri* Goods”, always tailored to our customers' needs.

Based upon the trajectory of our company's development thus far, we have been conducting research and development at our KBIC Development Office all the way from the raw materials straight down to the finished device/system in order to tackle the QCD (quality, cost and delivery of products) challenge that inevitably arises when attempting to manufacture a wide variety of products in a small volume. Using our "Composite Nylon Injection Technology" designated as a "Kawasaki Monodukuri Brand" product, we are also conducting R&D on Japanese cedar materials.
