# Re-al, LLC.

Real Haptics is a technology for transmitting to a remote location, storing and reproducing friendly and flexible human movements. Since the beginning of human history, we have touched and manipulated only the objects that simultaneously exist in the space directly in front of us. By using this technology, however, we can eliminate these spatial and temporal restrictions. Our team aims to realize the "Real Avatar," which transfers not only audiovisual but also tactile force sensations, and solves human problems such as poverty, labor shortages, and
